

## **Material Safety Data Sheet**

### **IDENTIFICATION**

**BLISTER CUSHION PLASTER**

**PRODUCT CODE: 8078FC**

**PRODUCT NAME: STEROPLAST BLISTER CUSHION PLASTER**

#### **Description**

The primary function is to prevent and manage blisters. The product is versatile enough to be used on area of skin that is bruised.

---

#### **Composition**

The plaster is a combination of a PU overlay coated in acrylic adhesive with a hydrogel island. The product is designed to provide higher protective and absorptive capacity directly over the blister.

The hydrogel island is approx 30% water and upto 70% acrylic polymer.

The gel is permeable to water vapour and gases and provides a moist wound healing environment.

Will absorb exudates and will not adhere to the wound site.

---

#### **Method Of Use**

The plaster may be placed directly over the unbroken or broken blister and is held in place by the acrylic adhesive. The plaster is highly conformable and comfortable to wear and can be worn whilst bathing, showering or swimming. The plaster can be used for upto 4 days but should be replaced if the condition of the wound dictates or when the gel becomes cloudy or opaque due to the adsorption of exudates. If infected the wound should be changed more frequently.

---

## **Contra-Indications**

Should not be used as a covering for deep narrow cavities, sinuses or serious burns or scalds.

If the blister becomes reddened, swollen or painful, stop using and seek medical advice.

---

## **Shelf Life**

Anticipated shelf life would be 3 years when stored under cool and dry conditions. Avoid freezing.

---

## **Classification**

The product is classified as Class I (non-sterile) under EC directive 93/42/EEC and is manufactured to a recognised Quality Management System.

Issued : October 2011

Date of Review: November 2018
